Rank	Candidate ID	Main strength	Main concern	Reason for rank.
1	C15	Stable linear saturation; MSE 12.781494 at complexity 13.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
2	C3	Stable linear saturation; MSE 12.781494 at complexity 6.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
3	C9	Stable linear saturation; MSE 12.781494 at complexity 10.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
4	C18	Stable linear saturation; MSE 12.781494 at complexity 15.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
5	C21	Stable linear saturation; MSE 12.781494 at complexity 16.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
6	C6	Stable linear saturation; MSE 12.781494 at complexity 8.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
7	C12	Stable linear saturation; MSE 12.781494 at complexity 11.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
8	C7	Stable linear saturation; MSE 13.150558 at complexity 10.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
9	C16	Stable linear saturation; MSE 13.258680 at complexity 15.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
10	C19	Stable linear saturation; MSE 13.284157 at complexity 16.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
11	C1	Stable linear saturation; MSE 13.411432 at complexity 6.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
12	C5	Stable linear saturation; MSE 13.452826 at complexity 8.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
13	C20	Stable linear saturation; MSE 13.471455 at complexity 16.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
14	C2	Stable linear saturation; MSE 13.482201 at complexity 6.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
15	C8	Stable linear saturation; MSE 13.489165 at complexity 10.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
16	C17	Stable linear saturation; MSE 13.494301 at complexity 15.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
17	C14	Stable linear saturation; MSE 13.572015 at complexity 13.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
18	C11	Stable linear saturation; MSE 13.583367 at complexity 11.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.

Rank	Candidate ID	Main strength	Main concern	Reason for rank.
19	C4	Stable linear saturation; MSE 13.683257 at complexity 8.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
20	C13	Stable linear saturation; MSE 14.492866 at complexity 13.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
21	C10	Stable linear saturation; MSE 14.884294 at complexity 11.	No evident singularity; concern is comparatively higher training MSE than the best linear fits.	It satisfies the robustness criterion without an evident nearby singularity; among such candidates, its supplied MSE and complexity determine its position.
22	C24	Lower training MSE (11.764186) than most linear candidates.	Log domain ends at V≈23.11, inside the forecast interval [15.5, 25.5].	Its training fit is strong, but the nearby finite-domain boundary falls within the forecast interval, making extrapolation fragile under criterion 1.
23	C27	Lower training MSE (11.764186) than most linear candidates.	Log domain ends at V≈23.11, inside the forecast interval [15.5, 25.5].	Its training fit is strong, but the nearby finite-domain boundary falls within the forecast interval, making extrapolation fragile under criterion 1.
24	C26	Lower training MSE (12.239259) than most linear candidates.	Log domain ends at V≈23.94, inside the forecast interval [15.5, 25.5].	Its training fit is strong, but the nearby finite-domain boundary falls within the forecast interval, making extrapolation fragile under criterion 1.
25	C23	Lower training MSE (12.331747) than most linear candidates.	Log domain ends at V≈24.16, inside the forecast interval [15.5, 25.5].	Its training fit is strong, but the nearby finite-domain boundary falls within the forecast interval, making extrapolation fragile under criterion 1.
26	C22	Lower training MSE (28.238592) than most linear candidates.	Log domain ends at V≈40.82, inside the forecast interval [15.5, 25.5].	Its training fit is strong, but the nearby finite-domain boundary falls within the forecast interval, making extrapolation fragile under criterion 1.
27	C25	Lower training MSE (28.418601) than most linear candidates.	Log domain ends at V≈40.90, inside the forecast interval [15.5, 25.5].	Its training fit is strong, but the nearby finite-domain boundary falls within the forecast interval, making extrapolation fragile under criterion 1.

Top choice: C15. It is a robust linear saturation candidate with the lowest supplied training MSE among the non-singular linear candidates, and it has the lowest complexity among the candidates sharing that best MSE.

The linear candidates provide unrestricted positive-volume domains with stable saturation, while the logarithmic candidates have lower training MSE in some cases but introduce a finite-domain boundary inside the forecast interval. Consequently, the ranking treats that extrapolation fragility as more important than the training-fit advantage, then uses MSE and complexity within the more robust group.
