Accepted Candidate Ranking

Source: successful_candidates_N6_noise30_datasd47_pinnsd43_pinnn20_pysrsd77_lbd0.1.csv and the supplied AI Prompt PDF. Generated 2026-09-21 04:42:26 +0000.

Rank	Candidate ID	Main strength	Main concern	Reason for rank
1	C6	Stable positive-growth/saturation form; lowest observed MSE.	Complexity 8; no material concern relative to tied fits.	Tied for the lowest supplied MSE; lowest complexity among that tied group.
2	C18	Stable positive-growth/saturation form with relatively low MSE.	MSE is above the best tied group; complexity 16.	Placed by supplied MSE, with complexity considered after fit.
3	C12	Stable positive-growth/saturation form with relatively low MSE.	MSE is above the best tied group; complexity 13.	Placed by supplied MSE, with complexity considered after fit.
4	C9	Stable positive-growth/saturation form with relatively low MSE.	MSE is above the best tied group; complexity 11.	Placed by supplied MSE, with complexity considered after fit.
5	C3	Stable positive-growth/saturation form with relatively low MSE.	MSE is above the best tied group; complexity 6.	Placed by supplied MSE, with complexity considered after fit.
6	C15	Stable positive-growth/saturation form with relatively low MSE.	MSE is above the best tied group; complexity 14.	Placed by supplied MSE, with complexity considered after fit.
7	C21	Stable positive-growth/saturation form with relatively low MSE.	MSE is above the best tied group; complexity 18.	Placed by supplied MSE, with complexity considered after fit.
8	C10	Stable positive-growth/saturation form with relatively low MSE.	MSE is above the best tied group; complexity 13.	Placed by supplied MSE, with complexity considered after fit.
9	C7	Stable positive-growth/saturation form with relatively low MSE.	MSE is above the best tied group; complexity 11.	Placed by supplied MSE, with complexity considered after fit.
10	C13	Stable positive-growth/saturation form with relatively low MSE.	MSE is above the best tied group; complexity 14.	Placed by supplied MSE, with complexity considered after fit.
11	C2	Stable positive-growth/saturation form with relatively low MSE.	MSE is above the best tied group; complexity 6.	Placed by supplied MSE, with complexity considered after fit.
12	C5	Stable positive-growth/saturation form with relatively low MSE.	MSE is above the best tied group; complexity 8.	Placed by supplied MSE, with complexity considered after fit.
13	C11	Stable positive-growth/saturation form with relatively low MSE.	MSE is above the best tied group; complexity 13.	Placed by supplied MSE, with complexity considered after fit.
14	C14	Stable positive-growth/saturation form with relatively low MSE.	MSE is above the best tied group; complexity 14.	Placed by supplied MSE, with complexity considered after fit.
15	C8	Stable positive-growth/saturation form with relatively low MSE.	MSE is above the best tied group; complexity 11.	Placed by supplied MSE, with complexity considered after fit.
16	C20	Accepted robust positive-growth/saturation form.	Higher supplied MSE (29.145790) than the leading candidates.	Lower data agreement outweighs its otherwise accepted robustness.
17	C17	Accepted robust positive-growth/saturation form.	Higher supplied MSE (29.257977) than the leading candidates.	Lower data agreement outweighs its otherwise accepted robustness.
18	C4	Accepted robust positive-growth/saturation form.	Higher supplied MSE (30.494423) than the leading candidates.	Lower data agreement outweighs its otherwise accepted robustness.

Rank	Candidate ID	Main strength	Main concern	Reason for rank
19	C1	Accepted robust positive-growth/saturation form.	Higher supplied MSE (31.563889) than the leading candidates.	Lower data agreement outweighs its otherwise accepted robustness.
20	C16	Accepted robust positive-growth/saturation form.	Higher supplied MSE (51.233541) than the leading candidates.	Lower data agreement outweighs its otherwise accepted robustness.
21	C19	Accepted robust positive-growth/saturation form.	Higher supplied MSE (59.296558) than the leading candidates.	Lower data agreement outweighs its otherwise accepted robustness.

Top choice

C6. It has the lowest supplied training-trajectory MSE, and its complexity is the lowest among the candidates tied at that MSE. Its displayed right-hand side has positive growth at low volume and a negative volume-dependent term, consistent with the prompt's requested stable saturation behavior.

Comparison of the candidate set

All candidates were already accepted under the deterministic robustness requirements, so the ranking does not reject any candidate on feasibility grounds. The leading group shares essentially the same lowest supplied MSE, making complexity the differentiator within that group; candidates with larger MSE values fall below them regardless of their accepted robustness.
